Software Engineer — TypeScript • Distributed Systems • Hexagonal Architecture • Cloud

PROFESSIONAL SUMMARY

Software Engineer specialized in **TypeScript** and distributed systems, focused on building highly scalable SaaS platforms and AI automation infrastructures. Proven track record in applying **Domain-Driven Design (DDD)**, **Hexagonal Architecture**, and **SOLID** principles using **NestJS** and **Next.js**. Experienced in orchestrating asynchronous job processing with **BullMQ**, containerizing microservices with **Docker/Kubernetes**, and managing resilient cloud deployments on **AWS**.

PROFESSIONAL EXPERIENCE

Vendor	Feb 2026 – Present
<i>Chief Technology Officer (CTO)</i>	Remote
- Defined technical strategy, product roadmap, and core business rules for an enterprise AI voice agent platform. - Designed an event-driven system using Hexagonal Architecture, DDD, and SOLID principles to decouple complex domain logic and external AI providers. - Architected high-throughput background processing pipelines using BullMQ and Redis for asynchronous task orchestration and voice streaming. - Standardized the application lifecycle using Feature-Driven Development (FDD) and deployed scalable microservices with Docker, Kubernetes, and AWS.	
Case Digital Agency	Dec 2025 – Present
<i>Software Engineer</i>	Brazil
- Designed and developed robust full-stack web applications using TypeScript, NestJS, and Next.js following clean architecture practices. - Built automation workflows with n8n and external service integrations, reducing manual operational load by up to 60%. - Deployed and maintained cloud environments on AWS with Docker, ensuring high availability and fault tolerance.	
Freelance	Aug 2025 – Dec 2025
<i>Software Engineer</i>	Remote
- Architected and delivered SaaS platforms and business systems (ERP, inventory, POS) from discovery to production. - Developed backend services using NestJS, Prisma, PostgreSQL and responsive interfaces with Next.js. - Accelerated delivery cycles by 40% through strategic integrations with Supabase and cloud-native third-party APIs.	

TECHNICAL SKILLS

Core Languages & Frameworks: TypeScript (Node.js, NestJS, Next.js, React)

Architecture & Methodologies: Domain-Driven Design (DDD), Hexagonal Architecture, SOLID, Feature-Driven Development (FDD), Clean Code

Messaging & Queues: BullMQ, Redis, Event-Driven Architecture

Databases & ORM: PostgreSQL, MySQL, Prisma ORM, Supabase, Vector Databases

Cloud, DevOps & Tooling: AWS, Kubernetes, Docker, n8n, CI/CD Pipelines, Git, REST APIs, Swagger

Practices: Agile (Scrum/Kanban), Automated Testing, System Design

PROJECTS

Vendor – Enterprise AI Voice Agent Platform	GitHub available upon request
- Multi-tenant SaaS platform built to automate real-time outbound and inbound phone operations using autonomous AI voice agents. - Implemented with NestJS, TypeScript, BullMQ, and Redis, orchestrating low-latency VoIP integrations, real-time speech-to-text/text-to-speech pipelines, and conversational LLMs. - Architected following Hexagonal Architecture and DDD to ensure seamless provider switching and decoupled business rule execution.	

PJ Risk Calculator

GitHub available upon request

- Web application designed for cost estimation and fiscal compliance analysis in contracting models.
- Built with **TypeScript and Next.js**, featuring automated server-side PDF generation and dynamic financial simulations.

EDUCATION

Federal Institute of Ceará (IFCE)

2025 – 2028

B.Tech in Telematics

Geração Tech 2.0

2025

Full Stack Web Development (192h)

LANGUAGES

- English: Fluent (Professional Working Proficiency)
- Spanish: Basic
